January 5, 2018

On December 22, 2017 the District had all of the water outlets that tested above EPA standards in the stagnant water test with a flow test. This is where the water is run for a period of time and then the sample is taken. The results showed that all of the affected outlets tested below EPA standards for lead. The results can be found on the website labeled Flow Test 12-22-17. The District will continue to monitor for lead and the results of those tests will be posted on the website. We will also be implementing a program where faucets and fountains will be flushed after weekends or longer breaks. We are pleased that the results of the flow test showed that our water system is at acceptable levels according to the EPA.

Thank You,

Joseph Mancini
